

Package of Practices

In this section, crop wise package of practices are provided for the crops in India. Package of practices developed by the Indian Council of Agricultural Research institutions, Agricultural Universities and State agricultural departments are uploaded. In case it is not available for specific crop for the specific state, then you can consider package of practices developed for the same crop for any other state and then consider the amendments as applicable to the local conditions in the state.

Brief About the Requirements:

- A Good Agricultural Package of Practices is a prescription for growing different crops in scientific manner for obtaining the improved crop productivity, quality and sustainable production.
- Package of practices broadly covers selection of seed materials to harvesting stage. It may differ for Kharif and Rabi seasons and vary from State to State within the country
- Indian Council of Agricultural Research Institutions, Agricultural Universities and State Agricultural Departments are the primary bodies that develop this package of practices for use by the farmers in India.
- It is most important to obtain a copy of this document as applicable to the crop as many requirements of the Organic/GAP standards can be linked to these practices for compliance and demonstration.
- We have made efforts in making available package of practices for many crops which are prepared by the institutions referred above.
- Though, state wise package of practices not available for many crops, it is advised to look into the package of practices that is available for the crop and modify it into specific practices as per local conditions in the state.

Notes:

- You are always advised to visit the websites of ICAR institutions, Agricultural universities and agricultural departments for updates on package of practices
